And, just as alcohol tends not to impair recall of memories established before alcohol exposure, alcohol does not disrupt the expression of LTP established before alcohol exposure. One of the key requirements for the establishment of LTP in the hippocampus is that a type of signal receptor known as the NMDA 2 receptor becomes activated. Ethanol (also called ethyl alcohol, grain alcohol, drinking alcohol, or simply alcohol) is an organic chemical compound.It is a simple alcohol with the chemical formula C 2 H 6 O.Its formula can be also written as CH3 – CH 2 – OH or C 2 H 5 OH (an ethyl group linked to a hydroxyl group), and is often abbreviated as EtOH.. Effects of Family Structure on the Academic Performance of Students at Elementary Level in District Karak Khyber Pakhtunkhwa (Pakistan). Journal of Sociological Research, 3, 2. Find the latest science-based information about drug use, health, and the developing brain. Designed for young people and those who influence them—parents, guardians, teachers, and other educators—these resources inspire learning and encourage critical thinking so teens can make informed decisions about drug use and their health. Stress in medical students is stress caused by strenuous medical programs, which may have physical and psychological effects on the well-being of medical students. Excessive stress in medical training predisposes students for difficulties in solving interpersonal conflicts as a result of previous stress.
